Assignment 3 – Firewall Configuration

**Cheriya Puthan Veettil Muhammed Irfan
Matricular – 7127908**

Abstract

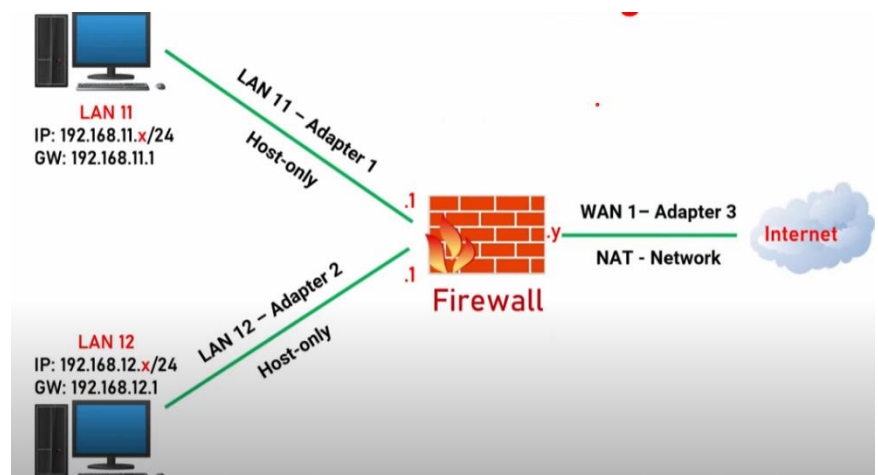

This report documents the setup, testing, and analysis of the network with and without firewall rules. Primary aim was to verify the communication between hosts and a cloud network. And evaluate the effectiveness of configured firewall in restricting traffic.

Introduction

This experiment aims to access the communications between two host and a cloud network under different firewall rules and without any firewall rules. The firewall rule added to restrict specific traffic. Wireshark was used to packet capture and analysis.

Setup

- LAN11
IP- 192.168.11.1
- LAN12
IP- 192.168.12.1
- WAN 1
IP- 111.111.111.116

Tools and Software

- Virtual Box
- OPNsense (user: root, password: rootadmin)
- Wireshark

Network Types

- Host-only network – LAN11
- Host-only network#2 – LAN12
- Nat Network

Verification Plan

With out Firewall Rules:

1. Ping Test: Confirms Successful communication.

With Firewall Rules:

1. Ping Test: Expect Ping failure and Successful communication.
2. TCP/UDP Test: Confirms blocked/allowed connection.
3. Firewall Rules Verification: Analyse packet for blocked/ allowed traffic.

Proof of Operation

Ping Test (without Rules): LAN11

```
Enter a host name or IP address: 192.168.11.1

PING 192.168.11.1 (192.168.11.1): 56 data bytes
64 bytes from 192.168.11.1: icmp_seq=0 ttl=64 time=0.178 ms
64 bytes from 192.168.11.1: icmp_seq=1 ttl=64 time=0.109 ms
64 bytes from 192.168.11.1: icmp_seq=2 ttl=64 time=0.152 ms

--- 192.168.11.1 ping statistics ---
3 packets transmitted, 3 packets received, 0.0% packet loss
round-trip min/avg/max/stddev = 0.109/0.146/0.178/0.028 ms

Press ENTER to continue.
```

Ping Test (with Rules): LAN11

```
C:\Users\irfan>ping 192.168.11.1

Pinging 192.168.11.1 with 32 bytes of data:
Request timed out.
Request timed out.
Request timed out.
Request timed out.

Ping statistics for 192.168.11.1:
    Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),
```

Ping Test (without Rules): LAN12

```
Enter a host name or IP address: 192.168.12.1

PING 192.168.12.1 (192.168.12.1): 56 data bytes
64 bytes from 192.168.12.1: icmp_seq=0 ttl=64 time=0.194 ms
64 bytes from 192.168.12.1: icmp_seq=1 ttl=64 time=0.049 ms
64 bytes from 192.168.12.1: icmp_seq=2 ttl=64 time=0.443 ms

--- 192.168.12.1 ping statistics ---
3 packets transmitted, 3 packets received, 0.0% packet loss
round-trip min/avg/max/stddev = 0.049/0.229/0.443/0.163 ms

Press ENTER to continue.
```

Ping Test (with Rules): LAN12

```
C:\Users\irfan>ping 192.168.12.1

Pinging 192.168.12.1 with 32 bytes of data:
Request timed out.
Request timed out.
Request timed out.
Request timed out.

Ping statistics for 192.168.12.1:
    Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),
```

Ping Test (google)

```
Enter a host name or IP address: google.com

PING google.com (216.58.215.238): 56 data bytes
64 bytes from 216.58.215.238: icmp_seq=0 ttl=114 time=20.491 ms
64 bytes from 216.58.215.238: icmp_seq=1 ttl=114 time=21.880 ms
64 bytes from 216.58.215.238: icmp_seq=2 ttl=114 time=20.492 ms

--- google.com ping statistics ---
3 packets transmitted, 3 packets received, 0.0% packet loss
round-trip min/avg/max/stddev = 20.491/20.955/21.880/0.654 ms

Press ENTER to continue.
```

Firewall Rules

LAN11

Firewall: Rules: LAN11										Select category	Inspect
	Protocol	Source	Port	Destination	Port	Gateway	Schedule		Description		
Automatically generated rules											
	IPv4 *	*	*	*	*	*	*		Allow Internet		
	IPv4 *	*	*	PrivateRanges	*	*	*		Reject PrivateRangers		
	IPv4 UDP	*	*	This Firewall	53 (DNS)	*	*		allow DNS		
	IPv4 ICMP	*	*	This Firewall	*	*	*		Allow Ping to firewall		
	IPv4 *	*	*	LAN11 net	*	*	*		Allow access to LAN2		
pass		block		reject		log		in	first match		
pass (disabled)		block (disabled)		reject (disabled)		log (disabled)		out	last match		
Active/Inactive Schedule (click to view/edit)											
Alias (click to view/edit)											
LAN11 rules are evaluated on a first-match basis by default (i.e. the action of the first rule to match a packet will be executed). This means that if you use block rules, you will have to pay attention to the rule order. Everything that is not explicitly passed is blocked by default.											

LAN12

Firewall: Rules: LAN12										Select category	Inspect
	Protocol	Source	Port	Destination	Port	Gateway	Schedule		Description		
Automatically generated rules											
	IPv4 *	*	*	LAN11 net	*	*	*		Allow access to LAN1		
	IPv4 UDP	*	*	This Firewall	*	*	*		Allow DNS		
	IPv4 ICMP	*	*	This Firewall	*	*	*		Allow Ping to firewall		
	IPv4 *	*	*	*	*	*	*		Allow Internet		
	IPv4 *	*	*	LAN11 net	*	*	*				
	IPv4 *	*	*	PrivateRanges	*	*	*		Reject PrivateRangers		
pass		block		reject		log		in	first match		
pass (disabled)		block (disabled)		reject (disabled)		log (disabled)		out	last match		
Active/Inactive Schedule (click to view/edit)											
Alias (click to view/edit)											
LAN12 rules are evaluated on a first-match basis by default (i.e. the action of the first rule to match a packet will be executed). This means that if you use block rules, you will have to pay attention to the rule order. Everything that is not explicitly passed is blocked by default.											

Floating

Firewall: Rules: Floating

Select category Inspect

	Protocol	Source	Port	Destination	Port	Gateway	Schedule	Description	
Automatically generated rules									
<input type="checkbox"/>	IPv4 TCP	*	*	This Firewall	80 (HTTP)	*	*	1 HTTP access to firewall	⚙️ 🔍 🗑️
<input type="checkbox"/>	IPv4 TCP	*	*	This Firewall	443 (HTTPS)	*	*	1 HTTPS access to firewall	⚙️ 🔍 🗑️
<input type="checkbox"/>	pass	block	reject	log	in	first match			
<input type="checkbox"/>	pass (disabled)	block (disabled)	reject (disabled)	log (disabled)	out	last match			
Active/Inactive Schedule (click to view/edit)									
Alias (click to view/edit)									

Floating rules are evaluated on a first-match basis (i.e. the action of the first rule to match a packet will be executed) only if the "quick" option is checked on a rule. Otherwise they will only apply if no other rules match. Pay close attention to the rule order and options chosen. If no rule here matches, the per-interface or default rules are used.

Discussion

1. Effectiveness of firewall configuration
 - a. Checked configured rules successfully restricted/allowed specific types of traffic.
 - b. Firewall blocked traffic that set-in firewall rule for LAN's.
2. Traffic types used to restrict/allowed for communicated.
 - a. ICMP
 - b. TCP
 - c. UDP

Findings

*If firewall is down or not functioning properly, there is no barrier/filter for incoming and outgoing traffic. It makes unauthorized access to network.

*Sometimes it makes false positives.

*OPNsense is wide topic to explore.

Conclusion

From this assignment served exploration of network security through the implementation and testing of firewall configuration. At first confirmed the seamless communication between Host's and cloud in the absence of firewall rules. Introduction of firewall rules makes controlling the traffic over network. Testing the effectiveness of firewall configuration highlights the importance of rule creation, that makes balance between securing the network and allowing only essential communication.

This assignment provide valuable information of relationship between firewall and network.
